

Custom ERP development for a European agri-based enterprise

Custom ERP development for a European agri-based enterprise

Services offered: Custom ERP for business process automation and streamlined resource management

Industry: Agriculture

BACKGROUND

A European agri enterprise had difficulty managing its business operations seamlessly and so approached us to enhance the flexibility and transparency of its internal business operations like document flow, planning and managing resources, tracking working time, and so on.

SOLUTION IMPLEMENTED

- We analyzed the client's business requirements and suggested utilizing our ERP proprietary framework.
- The system was built with rich features to manage day-to-day business activities such as the automation of key business processes, enterprise-wide file sharing and coordination, secure team communication, automation of workforce management, etc.
- The system was built quickly within 7 months and showed user-friendly and smooth performance. The usage of our proprietary framework contributed to the development speed and flexibility of the system.
- The ERP system built also had a smart search mechanism that enabled users to set up various search criteria for target search results.

OUTCOMES

2.5X

Improved workforce management

3X

Improvement in company's efficiency

The client was happy with the ERP system as it enhanced the company's efficiency and productivity. It helped them manage the enterprise data with ease, accuracy, and speed. The system was very easy to manage and required minimal costs and efforts for functionality extension and new integrations. The user-friendly interface made it convenient to use.
