

Custom ERP development for a European manufacturing firm

Custom ERP development for a European manufacturing firm

Services offered: Development of ERP system to streamline operations and adapt to changing market conditions.

Industry: Manufacturing

BACKGROUND

A European manufacturing firm that specializes in precision components for the automotive sector approached us for a comprehensive solution to overcome the challenges of managing inventory, production schedules, quality control, integration issues, lack of real-time data, and so on. Their existing systems were also outdated and so lacked the flexibility to adapt perfectly to changing market conditions.

SOLUTION IMPLEMENTED

- We analyzed the client's business requirements and suggested using our ERP proprietary framework.
- The system was developed with several rich features to manage day-to-day business activities such as production planning, quality control, inventory management, etc.
- We implemented a user-friendly dashboard that provided real-time insights into inventory levels, production metrics, and many more.
- Integrated the ERP system with existing platforms and tools to make sure of seamless data flow across different departments.
- The system was built quickly within 7 months and showed user-friendly and smooth performance. The usage of our proprietary framework contributed to the development speed and flexibility of the system.

OUTCOMES

30%

Improvement in production scheduling

2.5x

Cohesive workflow

2x

Revenue upliftment

The client was happy with the ERP system as it addressed their immediate operational hurdles and also helped position them for future growth. With the utilization of felicitous technology and custom software solution, the business enhanced its competitive edge in the manufacturing domain.
